Do you take pride in creating effective and enjoyable software experiences for users? We're looking for a UI/UX designer who understands what's required to win in an experience-oriented market. Chosen candidates will work in a team of <team size> and report to the <senior post>.

### Responsibilities

- Build information architecture (IA) as the foundation of the website
- Ensure the IA is strongly adhered to
- Perform UI designs and coding, creating reusable objects and templates, produce wireframes for web pages and email templates
- Create a legible and clear user flow for new and existing users
- Extend the key creative idea across various platforms, devices, form factors, and screen sizes
- Consider both user needs and business goals and translate them into design concepts easily understood by the target audience
- Ability to consolidate feedback into design with the interest of users in mind

### Requirements

- Working knowledge of web applications, programming languages, and web services
- Adept to learn and pick up new design and UX tools on the go
- Experience with Agile working method
- Proven to work well with software engineering teams
- Pays exceptional attention to details with a passion for speed and efficiency
